

CAiSE'12

CAiSE'12 supports wireless internet access using two different access methods. The first method will provide access through the EDUROAM wireless network using the delegate's credential from their own institution. For more information about EDUROAM please visit http://www.eduroam.ug.edu.pl/en/about_eduroam/

The second method will provide access through the KCIK wireless network using credentials that participants will receive in conference materials during on-site registration.
